

Over The Air Updates

Make sure the head unit and CANbus module are updated to the latest software version before using the system or delivering it to the customer.

Your head unit may have **two types of updates** available:

1. **General Software Update** – Updates the head unit’s system.
2. **CANbus Module Update** – Updates the CANbus module (if applicable).

General Software Update

Step 1: Disable Wireless CarPlay/Android Auto

- Open Settings on the head unit.
- Go to Bluetooth and temporarily disable it.
- This prevents the unit from trying to connect to Wireless CarPlay/Android Auto via Wi-Fi.

Step 2: Connect to the Internet

- Use a mobile hotspot or home/work Wi-Fi (if in range).
- On the head unit, go to Settings > Wi-Fi.
- Select your Wi-Fi network, enter the password, and connect.

Step 3: Run the Update

- Open Settings on the head unit.
- Scroll down and select System.
- Scroll to the bottom and select OTA Update.
- Tap Check for Updates.
- If an update is available, let it install completely.

Step 4: Re-enable Wireless CarPlay/Android Auto

- If your unit does not have a CANbus module, re-enable Bluetooth:
- Go to Settings > Bluetooth.
- Turn Bluetooth back on to resume Wireless CarPlay/Android Auto.
- If your unit has a CANbus module, proceed to the CANbus Module Update on the next page.

CANbus Module Update (If Applicable)

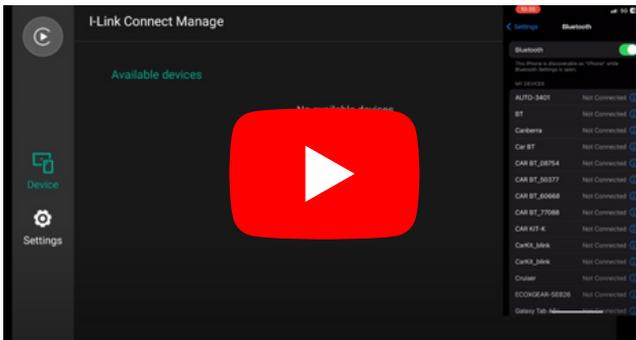

Step 1: Run the Update

- Open the Car app on the head unit.
- Tap the Car icon in the top left corner.
- Scroll down to the bottom and tap Check for Updates.
- If an update is available, let it install completely.

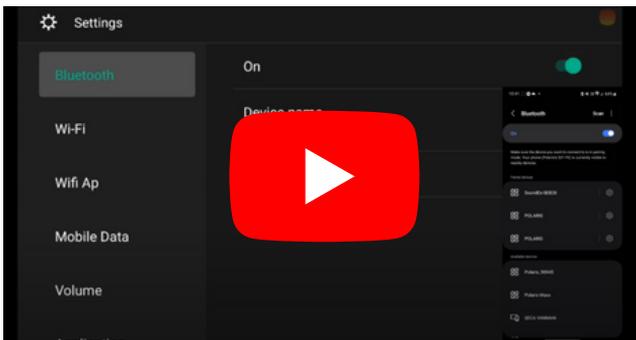

Step 2: Re-enable Wireless CarPlay/Android Auto

- Go to Settings > Bluetooth.
- Turn Bluetooth back on to resume Wireless CarPlay/Android Auto.
